

CONGRATULATIONS ON YOUR CHOICE OF A 'SUKKAH MART SUKKAH'

Important Note: The Sukkah **MUST** be erected against one or two solid walls of a house and must be tied down to a solid object (wall or fence) in at least two places.

As the sukka is lightweight if it is not tied down it can easily be blown and moved around by strong winds. Therefore it is **IMPERATIVE** to erect it against the house and secure the sukka with rope or string at several points so that it will **NOT** be able to move at all.

Sukkahmart will not be responsible for damage caused to the sukka or otherwise due to sukka not erected and fastened correctly.

In the Box:

The Sukkah is made of strong parachute material and is designed to fit around its frame with the utmost ease. The Sukkah features two roll up windows and a zip-up door with nets to keep the bugs out. No screws, nails or tools are required. The poles are designed to interlock into each other.

The basic Sukkah consists of:

- 4 vertical poles (stand vertically with loops in them)
- 11 horizontal poles (lie horizontally with wedges in them)
- 1 canvas material green and white (or blue and white)

The 3x4 m Sukkah has an extra 2 vertical poles (stand vertically in the middle of the Sukkah) as well as an extra 7 horizontal poles (lie horizontally). Note if your sukka has thicker horizontal bars they are to be used as the top horizontals.

Basic Sukkah: 2x2m or 2x3m or 3x3m

3x4 Sukkah

ASSEMBLY:

Construct the frame as in the diagram above as follows: Lay the poles out on the ground in the way that they would be constructed: i.e. Place the four vertical poles in the four corners two vertical poles for each wall and one horizontal pole for each corner.

For the 3x4 meter Sukkah: Place the four vertical poles in the four corners. On the 3 meter sides place two horizontal 3 meter poles on each side; On the four meter sides, place two horizontal 2 meter poles alongside another two poles with the vertical 'joining' poles in between them. Place a 3 meter Horizontal pole between the two vertical joiners.

You must now construct the frame freestanding before applying the canvas material. The frame will stand on its own and will not fall over if all the wedges are properly inserted in the vertical poles. At this stage, all the wedges on the horizontal poles should face downward. Do not insert the middle waist height horizontal poles until the end. Ensure that the square loop on the middle of each vertical pole is at the bottom half of the pole. Note: the wedge (horizontal) poles are made to insert into the loop (vertical) poles other with ease. Should you experience difficulty, try aligning your vertical poles so that the Sukkah is a perfect square or rectangle. You will now have the full frame standing alone.

Unravel the material around your frame and ensure that the door is in the correct position. The door will usually be on the right hand side of a 2 meter side wall. The top of the material is white in colour. Start hanging the material over the poles from the top of your Sukkah with the Velcro tabs tightened over the top poles first. Open each Velcro flap and tighten it over the horizontal pole and so on going around the full length of the top horizontal poles. Then do the same for the bottom velcros ensuring that the bottom horizontal pole wedges face upwards (see diagram above). Do the same for all the four sides and thereafter tighten the bottom Velcro by pulling them underneath the bottom horizontal frame poles and tightening them so the walls are taut and do not flap in the wind.

Note: When you insert the bottom horizontal poles into the verticals you must invert them so that the wedges face upwards. As per the diagram above. This is essential so that the poles hold the wall material taut. If you experience difficulty with connecting the poles, move over the material away from the corners to ease the tension. Connect the frame and stretch the material back into position.

Now, place the middle poles into their slots facing downwards and tie all the laces and Velcro straps.

Apply your bamboo rods or wooden planks over the top section of the frame and tie them down onto the Sukkah frame. You can now roll on your Permanent Schach, tie it down with natural Gava fibres and decorate your Sukkah.

SukkahMart also provides other products for Sukkot:

Decorations Packs to decorate and beautify your Sukkah.

Permanent Schach These beautiful mats can be used from year to year. Made of light reeds and held together by natural "Gava" fibers, and have been approved by Halachic authorities worldwide. It is neat and tidy, does not leave dry spots, nor drop leaves in your soup. It is no 'schlep' to carry and no struggle to put up. You just roll it over your Sukkah and roll it off after Sukkot and store it for next year. Use only natural fibers to tie your Schach down onto the Sukkah.

Lulav & Etrog Sets of the best quality with prominent Hechsherim at affordable prices.
